

STORMWATER MANAGEMENT: LANDSCAPING

Stormdrains on campus deposit any and all liquids directly into the Campus Lagoon and Pacific Ocean. Anything other than rainwater is prohibited and is the cause of water pollution. Only rain down the stormdrain!

DO NOT: Blow, sweep, rake or hose yard waste into the street.
DO: Recycle leaves, grass clippings and other yard waste.

DO NOT: Adopt a “chemicals only” approach to pest control.
DO: Utilize an Integrated Pest Management system. This includes a primary focus on physical controls, then biological controls, then chemical controls as a last resort.

DO NOT: Cause run-off by over watering the landscape.
DO: Water just enough to soak into the ground, conserve water by controlling the amount of flow and direction of sprinkler heads.

DO NOT: Apply chemicals near curbs and driveways, before a rain, or blanket-apply across large expanses.
DO: Spot apply fertilizers and pesticides only as needed.
